To the Weymouth Retirement Board:

For the purpose of satisfying the requirements of the Government Accounting Standards Board (GASB) Statements No. 67 and 68, Stone Consulting, Inc. has prepared a set of illustrative tables and other Required Supplementary Information (RSI) based on the January 1, 2020 actuarial valuation of the Weymouth Retirement System performed by Stone Consulting, Inc.

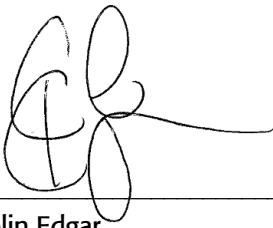

The valuation and this report are based on data provided by the Weymouth Retirement System, and were prepared using generally accepted actuarial principles and practices and meet the parameters set by the Governmental Accounting Standards Board (GASB).

To the best of our knowledge, this report is complete and accurate, and the assumptions used represent a reasonable estimate of anticipated experience of the system. Stone Consulting, Inc. is completely independent of the Town of Weymouth and the Weymouth Retirement System. This includes any of its officers and key personnel. Neither we or anyone else closely associated with us has any relationship with either that would impair our independence, other than this or related assignments such as OPEB valuations for the Town.

We are pleased to present these exhibits. If the Board has any questions on the content of this report, we would be glad to respond. Please note that this report is meant to be used in its entirety. Use of excerpts of this report may result in a misleading or inaccurate understanding of the results.

The undersigned is a consultant for Stone Consulting, Inc. and a member of the American Academy of Actuaries and meets the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

CHANGES IN METHODS, ASSUMPTIONS, AND PLAN PROVISIONS

This report is based on the results of the January 1, 2020 actuarial valuation. The 2020 valuation included a reduction of the discount rate from 7.50% to 7.25%, a reduction of the payroll increase assumption from 4.25% to 3.00%, and an update of the mortality assumption. The effect of these changes was recognized in the Net Pension Liability for the previous measurement period, so the amount shown above for "Change in assumptions" is \$0.

Projection of the Net Pension Liability

TOTAL PENSION LIABILITY (TPL)

The Total Pension Liability at the beginning of the measurement period (01/01/2021) is equal to the TPL from the end of the previous measurement period. The TPL is rolled forward through each measurement period by:

- Adding the Service Cost,
- Subtracting benefits paid,
- Applying interest (as calculated on page 6), and
- Recognizing any changes from new valuation results.

The Actuarial Accrued Liability (AAL), calculated as of the valuation date, is compared to the projected TPL. The difference between the two figures is measured as of the measurement date, and allocated to the following categories:

- Changes in assumptions
- Changes of plan provisions
- The remainder of the difference is allocated to "Differences between actual and expected experience"

All of these changes are recognized immediately in the TPL. Their treatment in the pension expense is discussed on the following page. Note that the TPL shown includes a 1/1/2020 liability of \$1,113,312 for net 3(8)(c) payments, calculated by assuming that every dollar of 3(8)(c) net benefit generates the same amount of liability as a dollar of the total retirement benefit, and rolled forward with the rest of the TPL. This method differs from the funding valuation, where net 3(8)(c) payments are funded on a pay-as-you-go basis and no explicit liability is calculated.

PLAN FIDUCIARY NET POSITION (FNP) AND NET PENSION LIABILITY (NPL)

GASB Statement No. 68, Paragraph 59 requires that the fair value of assets be used for the Fiduciary Net Position. For the fair value of assets we used the market value of assets adjusted by payables and receivables.

The Net Pension Liability (NPL) is the portion of the TPL not covered by the FNP. This amount is presented as a percentage of covered payroll. The NPL ratio for the Weymouth Retirement System is 131.3% of covered pay. In this report, covered pay is reported as described in GASB Statement No. 82 – pensionable payroll for the measurement period.

PENSION EXPENSE AND NET DEFFERALS

For the Pension Expense, gain and losses are recognized over a period of multiple years, with a portion being recognized immediately and the remainder being added to deferred inflows and outflows:

- Asset gains and losses are recognized over a five-year period [GASB 68, Paragraph 71b]
- Experience and Assumption changes are recognized over the average remaining service of the current members [GASB 68, Paragraph 71a]
- Plan provision changes are recognized immediately

Some inflows/outflows which originated in prior measurement periods will continue to be recognized this period. The total amount to be recognized this period is part of the pension expense; the remainder is included in the deferrals. Both are shown on the following page, and are calculated in greater detail on pages 9-10.

RESULTS BY EMPLOYER

Exhibits are provided beginning on page 16 which provide individual results for the various employers that make up the Weymouth Retirement System. Pension expense, as well as any deferred inflows and outflows of resources, and any excess contribution generated by Federal Grants, have been allocated to the various employers in the same manner as the FY2022 appropriation.

Per GASB 68, the change in proportionality from FY2021 to FY2022 of the individual employers' NPL and deferred inflows and outflows need to be allocated to the individual employers. This is calculated on page 16. These amounts are then recognized over the average remaining service, which is 5.1 years. The recognition of proportion changes is developed on page 17.

Discount Sensitivity

The following presents the Weymouth Retirement System’s Net Pension Liability calculated at the valuation discount rate of 7.25%, as well as at discount rates one percent lower (6.25%) and one percent higher (8.25%).

Fiscal Year	1% Decrease (6.25%)	Current Discount Rate (7.25%)	1% Increase (8.25%)
2022	\$ 103,290,381	\$ 66,628,459	\$ 35,556,505

Long-Term Expected Real Rate of Return

The long-term expected real rate of return reflects the expected rate of return on plan assets minus the expected rate of inflation. Note that the discount rate includes the effect of inflation. The long-term real rate of return removes the effect of inflation on the return amounts. It is a long-term assumption and is meant to reflect a reasonable estimate of future experience, based on the expected asset allocation.

Allocation percentages are based on information provided by the Weymouth Retirement System and Fiduciary Investment Advisors. The real rates of return below are based on estimates provided by Fiducient Advisors, adjusted using their 2.5% inflation assumption.

Asset Class	Target Allocation	Long-Term Expected Real Rate of Return (Geometric Average)
US Bond	10.50%	0.00%
US Bonds - Dynamic	3.00%	0.29%
EM Bond	2.50%	0.88%
Global Bonds	2.50%	-0.29%
US Equity (Large Cap)	30.00%	4.00%
US Equity (Small Cap)	8.00%	4.39%
International Equity	13.50%	5.95%
EM Equity	4.00%	7.80%
Real Estate	1.00%	3.71%
Private Real Estate	9.00%	4.68%
Broad Real Assets	4.00%	3.02%
Marketable Alternatives	7.00%	4.20%
Private Equity	5.00%	7.12%

Development of Results

DISCOUNT RATE

Projections were made using a discount rate assumption of 7.25%, which is consistent with the actuarial funding valuation. One of the objectives of the provisions of GASB 68 is to examine how benefit payments and plan contributions and investment earnings interact on a cash flow basis. GASB requires that these amounts be calculated with Market Value of Assets and using the Entry Age Normal cost method.

Projected contributions for each year are the sum of:

- Projected normal cost,
- Amortization of the unfunded liability,
- Administrative expense, and
- Other benefit costs such as 3(8)(c) payments.

The amortization bases and periods are consistent with those seen in the valuation report. Administrative expenses are increased by 3.00% per year. The Weymouth Retirement System's Fiduciary Net Position was projected to be available to make all future benefit payments of current active and inactive employees. Thus, the long-term expected rate of return on investments was applied for all benefit periods when calculating the Net Pension Liability.

The long-term rate of return which was used to develop the discount rate of 7.25% includes the effect of inflation (not subtracted out as in the real rates of return). It is based on a combination of expected rates of return on the mix of current and expected investments over a long-term period. These expectations are based on current market conditions, historical experience and future expectations. It assumes a rebalancing of assets on an ongoing basis as well as a constant monitoring of asset allocation and manager performance.

EXHIBITS

The recognition and deferral of various gains and losses are developed on the following two pages. These are followed by historical exhibits displaying changes in the NPL and contribution amounts for past years, the money-weighted rate of return, and finally the exhibits which display results by employer (including an exhibit which reconciles the last year's NPL with the current NPL).
